## **DETAILED ACTION**

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Drawings***

The drawings are objected to because Figure 1 appears to use reference numeral (14) for two different parts. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

Art Unit: 3763

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

#### **Arrangement of the Specification**

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. **Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading.** If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
  - (1) Field of the Invention.
  - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

#### **Claim Rejections - 35 USC § 112**

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 12 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The scope of claim 12 is unclear to the examiner because of

Art Unit: 3763

the phrase (preferably domed) and therefore the examiner maintains that the claim is indefinite. It is unclear if the applicant is claiming that the nose is domed or not.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Nicodel SA (WO 02/26295). Nicodel discloses a medical device comprising a retainer (16, 30) for retaining a needle (22) and a movable retractor (14, 76) adapted for connection with a connection member (30) of the retainer and for moving the needle from a use position to a retracted position (see Figures 4a-4f), wherein a tilt system (14, see page 14, lines 10-20) is provided for tilting the needle upon movement of the needle to the retracted position, the tilt system including a deflector (sides of 14) on the retractor for deflecting the connection member during movement of the retractor into engagement with the retainer, the connection member having an engagement part (legs of 30) on a longitudinal axis, wherein the engagement part is deflected off the axis by the deflector, wherein the retractor is formed on a plunger (72), wherein the device is a syringe and the retainer is located at the hub, and wherein the connection member is two legs (30) formed in a diamond shape.

Claims 1-9 and 12-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Wang et al. (6,530,903). Wang discloses a medical device comprising a retainer

(16) for retaining a needle (20) and a movable retractor (15) adapted for connection with a connection member (7) of the retainer and for moving the needle from a use position to a retracted position (see at least Figures 1-2), wherein a tilt system (6) is provided for tilting the needle upon movement of the needle to the retracted position, the tilt system including a deflector (sides of 6) on the retractor for deflecting the connection member during movement of the retractor into engagement with the retainer, the connection member having an engagement part (cone of 7) on a longitudinal axis, wherein the engagement part is deflected off the axis by the deflector, wherein the retractor is formed on a plunger (2), wherein the device is a syringe and the retainer is located at the hub, and wherein the connection member is a leg (7) formed in a domed shape.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 20060106340 A1 to Goossens et al. appears to be a similar device but does not qualify as prior art.
